## LES FORMES GÉOMÉTRIQUES EN ÉCOLE MATERNELLE

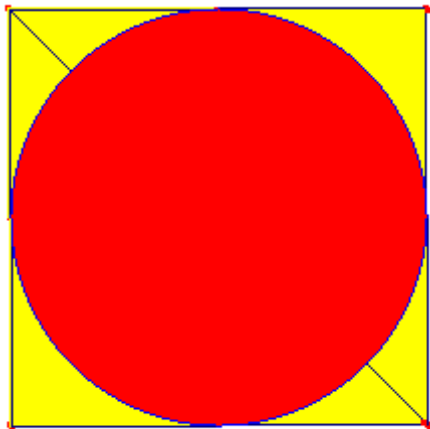

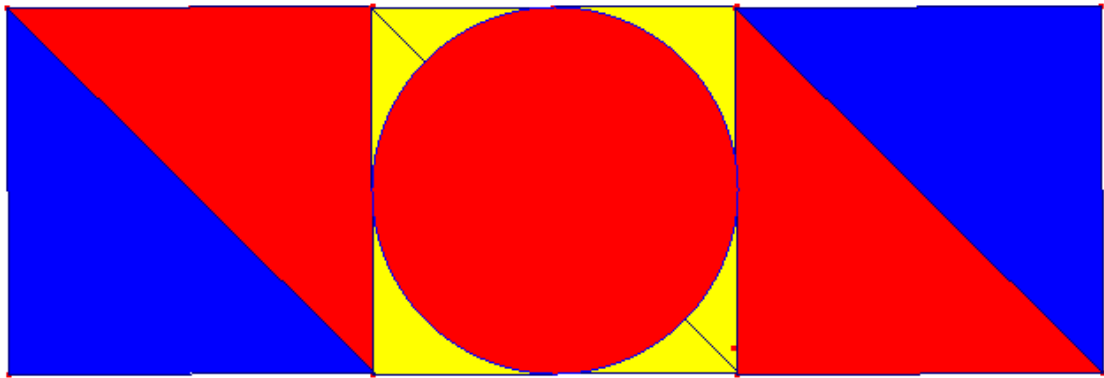

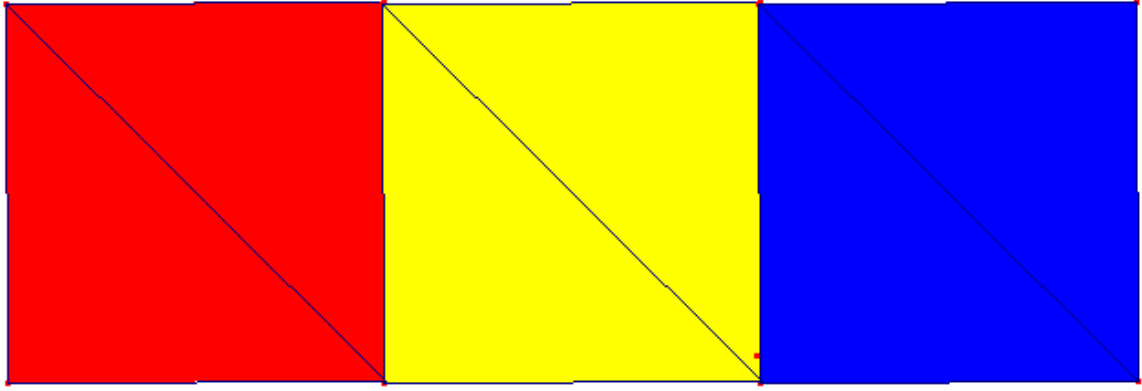

Il s'agit de donner la possibilité aux élèves de structurer les propriétés géométriques sur un matériel de papier cartonné de différentes couleurs utilisant des figures qui présentent des symétries : le cercle, le carré, le rectangle, les triangles rectangles isocèles, les triangles équilatéraux. D'autre part les collections de figures sont en rapport de 1 à 2 et de 1 à 3 (en agrandissement qui conserve la forme). Ceci permet encore de donner des possibilités de structurations géométriques par l'intermédiaire d'actions de superposition et de juxtaposition afin de réaliser d'autres figures.
